

IMPLEMENTATION

THEORY AND APPLICATION IN HEALTH CARE

The Department of Medical and Health Sciences (IMH) at Linköping University organizes an annual PhD-level course in implementation science (5 credits).

The course provides a broad introduction to the field of implementation science, its history, development and theoretical foundation. The overall aim is to achieve improved understanding of the challenges of implementing new practices in health care and the wider welfare sector.

The 9th edition will be given in the autumn 2019, with three on-site meetings at Linköping University: 2-3 September; 1-3 October; 28 November 2019. Course participants are also invited to participate in a lecture on 27 November given by implementation science pioneer Laura Damschroder, Implementation Pathways and Veterans Affairs (VA) Ann Arbor Center for Clinical Management Research.

This popular course has attracted PhD students from all over Sweden, representing more than 25 universities. Participants have also come from the Nordic countries and beyond. To date, almost 150 students have passed the course. Evaluations show that participants rate the course as highly relevant for their ongoing and future research.

Per Nilsen, Ann Catrine Eldh and Margit Neher from Linköping University teach in the course. External lecturers also participate.

With more than 26,500 students and 3,500 employees, Linköping University (LiU) is one of Sweden's largest universities. LiU has a long tradition of problem-based learning, which facilitates a critical approach to learning and supports students' ability to work together as a group.

Department of Medical and Health Sciences (IMH) is a fusion of different milieus representing disciplines ranging from research on the interaction of society and individual health, to experimental biomedical research.
