eHealth: Aims and Applications

Programme course

6 credits
E-hälsa: visioner och verktyg
TBMI04
Valid from: 2019 Spring semester

Determined by
Board of Studies for Electrical Engineering,
Physics and Mathematics

Date determined
2018-08-31
Main field of study

Biomedical Engineering

Course level

First cycle

Advancement level

G2X

Course offered for

- Biomedical Engineering, M Sc in Engineering
- Computer Science and Engineering, M Sc in Engineering
- Information Technology, M Sc in Engineering
- Engineering Biology, M Sc in Engineering

Entry requirements

The course is the first in a series of three courses and it is recommended that the student takes all courses.

Note: Admission requirements for non-programme students usually also include admission requirements for the programme and threshold requirements for progression within the programme, or corresponding.

Prerequisites

Three years of university studies with an engineering major. Basic knowledge in anatomy and physiology.

Intended learning outcomes

The overall purpose of the course is to analyse the concept of eHealth based on its interdisciplinary nature. The goal is for students to be able to integrate knowledge from the different parts of the course and critically appraise existing eHealth applications. Through joint teaching between faculties, the course also creates a foundation for interprofessional learning.
After completing the course, students are expected to be able to:

- describe the healthcare system with respect to work procedures, structure, management, and development over time
- explain the concept of eHealth from different points of view
- explain how the individual, organisation, and society can contribute to the development of eHealth
- describe how eHealth can influence health together with quality, attitudes, and work procedures within health and social care
- reflect upon their role in an interdisciplinary work group.

Course content

- The concept of health and factors influencing health for individuals, groups, and society
- Healthcare actors: management and organisation, obligations and responsibilities, processes and interaction, development over time
- Primary aims, benefits, costs, visions, and driving forces of eHealth
- Perspectives on eHealth: definitions and extensions, technological possibilities and limitations, infrastructure and applications, visions and challenges
- eHealth state of the art: electronic health interventions, applications, and enabling technologies such as image analysis, robotics, machine learning, and sensor systems
- Technological constraints for eHealth, their capacity and limitations
- Standardisation for interoperability, national service platforms and contracts
- Implementation and change in work procedures, professions, and leadership
- Ethical and legal aspects of medical information processing
- Human-technology interaction, end-user participation in technology and product development and service design, accessibility and involvement from an intersectional perspective
- Measuring quality, evidence-based eHealth, knowledge sources and resources

Teaching and working methods

The course is designed from a student-centered and problem-based perspective on learning where participants take their own responsibility for their learning through an active and processing approach to learning tasks. The role of the teacher is to support students in this process.

The teaching and working methods – lectures, project work, seminars, and tutorial groups – challenge students to independently formulate questions for learning, seek knowledge, and in dialogue with others appraise and evaluate the knowledge acquired. Students work together on reality-based situations to develop their own learning, contribute to the fellow students’ learning, and to practice cooperation.

The course is jointly taught by the Faculty of Medicine and Health Sciences and the
Faculty of Science and Engineering. Interprofessional learning, that is, different professions learning together with, about, and from each other, is an important aspect of the course.

**Examination**

- **UPG1**  Written group report and individual reflection report  U,G  4 credits
- **BAS1**  Tutorial groups and seminars  U,G  2 credits

**Grades**

F, P

**Subject area**

Other Subjects within Technology

**Disciplinary domain**

Technology

**Department**

Department of Biomedical Engineering (IMT)

**Director of Studies or equivalent**

Marcus Larsson

**Education components**

Preliminary scheduled hours: 48 h
Recommended self-study hours: 112 h
Common rules

Course syllabus

A syllabus has been established for each course. The syllabus specifies the aim and contents of the course, and the prior knowledge that a student must have in order to be able to benefit from the course.

Timetabling

Courses are timetabled after a decision has been made for this course concerning its assignment to a timetable module. A central timetable is not drawn up for courses with fewer than five participants. Most project courses do not have a central timetable.

Interrupting a course

The vice-chancellor’s decision concerning regulations for registration, deregistration and reporting results (Dnr LiU-2015-01241) states that interruptions in study are to be recorded in Ladok. Thus, all students who do not participate in a course for which they have registered must record the interruption, such that the registration on the course can be removed. Deregistration from a course is carried out using a web-based form: www.lith.liu.se/for-studenter/kurskomplettering/?l=sv.

Cancelled courses

Courses with few participants (fewer than 10) may be cancelled or organised in a manner that differs from that stated in the course syllabus. The board of studies is to deliberate and decide whether a course is to be cancelled or changed from the course syllabus.

Regulations relating to examinations and examiners

Details are given in a decision in the university’s rule book: http://styrdokument.liu.se/Regelsamling/VisaBeslut/622678.
Forms of examination

Examination

Written and oral examinations are held at least three times a year: once immediately after the end of the course, once in August, and once (usually) in one of the re-examination periods. Examinations held at other times are to follow a decision of the board of studies.

Principles for examination scheduling for courses that follow the study periods:

- courses given in VT1 are examined for the first time in March, with re-examination in June and August
- courses given in VT2 are examined for the first time in May, with re-examination in August and October
- courses given in HT1 are examined for the first time in October, with re-examination in January and August
- courses given in HT2 are examined for the first time in January, with re-examination at Easter and in August.

The examination schedule is based on the structure of timetable modules, but there may be deviations from this, mainly in the case of courses that are studied and examined for several programmes and in lower grades (i.e. 1 and 2).

- Examinations for courses that the board of studies has decided are to be held in alternate years are held only three times during the year in which the course is given.
- Examinations for courses that are cancelled or rescheduled such that they are not given in one or several years are held three times during the year that immediately follows the course, with examination scheduling that corresponds to the scheduling that was in force before the course was cancelled or rescheduled.
- If teaching is no longer given for a course, three examination occurrences are held during the immediately subsequent year, while examinations are at the same time held for any replacement course that is given, or alternatively in association with other re-examination opportunities. Furthermore, an examination is held on one further occasion during the next subsequent year, unless the board of studies determines otherwise.
- If a course is given during several periods of the year (for programmes, or on
different occasions for different programmes) the board or boards of studies determine together the scheduling and frequency of re-examination occasions.

Registration for examination

In order to take an examination, a student must register in advance at the Student Portal during the registration period, which opens 30 days before the date of the examination and closes 10 days before it. Candidates are informed of the location of the examination by email, four days in advance. Students who have not registered for an examination run the risk of being refused admittance to the examination, if space is not available.

Symbols used in the examination registration system:

** denotes that the examination is being given for the penultimate time.

* denotes that the examination is being given for the last time.

Code of conduct for students during examinations

Details are given in a decision in the university’s rule book: http://styrdokument.liu.se/Regelsamling/VisaBeslut/622682.

Retakes for higher grade

Students at the Institute of Technology at LiU have the right to retake written examinations and computer-based examinations in an attempt to achieve a higher grade. This is valid for all examination components with code “TEN” and ”DAT”. The same right may not be exercised for other examination components, unless otherwise specified in the course syllabus.

Retakes of other forms of examination

Regulations concerning retakes of other forms of examination than written examinations and computer-based examinations are given in the LiU regulations for examinations and examiners, http://styrdokument.liu.se/Regelsamling/VisaBeslut/622678.

Plagiarism
For examinations that involve the writing of reports, in cases in which it can be
assumed that the student has had access to other sources (such as during project
work, writing essays, etc.), the material submitted must be prepared in accordance
with principles for acceptable practice when referring to sources (references or
quotations for which the source is specified) when the text, images, ideas, data, etc.
of other people are used. It is also to be made clear whether the author has reused
his or her own text, images, ideas, data, etc. from previous examinations.

A failure to specify such sources may be regarded as attempted deception during
examination.

Attempts to cheat

In the event of a suspected attempt by a student to cheat during an examination, or
when study performance is to be assessed as specified in Chapter 10 of the Higher
Education Ordinance, the examiner is to report this to the disciplinary board of the
university. Possible consequences for the student are suspension from study and a
formal warning. More information is available at

Grades

The grades that are preferably to be used are Fail (U), Pass (3), Pass not without
distinction (4) and Pass with distinction (5). Courses under the auspices of the faculty
board of the Faculty of Science and Engineering (Institute of Technology) are to be
given special attention in this regard.

1. Grades U, 3, 4, 5 are to be awarded for courses that have written
examinations.
2. Grades Fail (U) and Pass (G) may be awarded for courses with a large
degree of practical components such as laboratory work, project work and
group work.

Examination components

1. Grades U, 3, 4, 5 are to be awarded for written examinations (TEN).
2. Grades Fail (U) and Pass (G) are to be used for undergraduate projects and
other independent work.
3. Examination components for which the grades Fail (U) and Pass (G) may be
awarded are laboratory work (LAB), project work (PRA), preparatory
written examination (KTR), oral examination (MUN), computer-based examination (DAT), home assignment (HEM), and assignment (UPG).

4. Students receive grades either Fail (U) or Pass (G) for other examination components in which the examination criteria are satisfied principally through active attendance such as other examination (ANN), tutorial group (BAS) or examination item (MOM).

The examination results for a student are reported at the relevant department.

Regulations (apply to LiU in its entirety)

The university is a government agency whose operations are regulated by legislation and ordinances, which include the Higher Education Act and the Higher Education Ordinance. In addition to legislation and ordinances, operations are subject to several policy documents. The Linköping University rule book collects currently valid decisions of a regulatory nature taken by the university board, the vice-chancellor and faculty/department boards.

LiU’s rule book for education at first-cycle and second-cycle levels is available at http://styrdokument.liu.se/Regelsamling/Innehall/Utbildning_pa_grund-_och_avancerad_niva.
