

# Aircraft Aerodynamics - Project Course

Programme course

6 credits

Aircraft Aerodynamics - Project Course

TMMV26

Valid from: 2021 Spring semester

**Determined by** Board of Studies for Mechanical Engineering and Design

**Date determined** 2020-09-29

## Main field of study

Aeronautical Engineering, Mechanical Engineering

#### Course level

Second cycle

#### Advancement level

A<sub>1</sub>X

#### Course offered for

- Mechanical Engineering, M Sc in Engineering
- Master's Programme in Aeronautical Engineering

## **Entry requirements**

This course concludes a master profile for the M and AER program and it is required that the student has already passed the preparatory profile courses. Prior to the start of the course, the examiner/director of studies will verify that participating students have sufficient knowledge, see information under Prerequisites.

### **Prerequisites**

Aerodynamics basic and advanced courses, Computational fluid dynamics basic and advanced, Engineering Systems Design, Aircraft conceptual design, Prototype Realization - project course.

## Intended learning outcomes

The aim of the course is to developing skills for making an integrated aerodynamic analysis of an aircraft concept. After completing the course the students will

- be able to transform a conceptual design into a model for an aerodynamic analysis, and for design refinement.
- have knowledge about using CFD tools for aerodynamics.
- be able to define design cases for aerodynamic analysis.
- be able to analyze and present the results from the analysis in a scientific way
- have skills to plan and conduct the work efficiently.

#### Course content

Theory and methodology from previous courses are used to conduct an aerodynamic analysis of a concept. Improvements are evaluated and proposed. Planning and time management in order to deliver results on time.

## Teaching and working methods

The course is carried out as a project with regular meetings. In addition there can be lectures in project specific technology when needed. The result from the project is a design of product presented orally and in a written report.

#### Examination

PRA1 Project work 6 credits U, G

#### Grades

Two-grade scale, U, G

#### Course literature

Material from previous courses.

#### Other information

#### About teaching and examination language

The teaching language is presented in the Overview tab for each course. The examination language relates to the teaching language as follows:

- If teaching language is Swedish, the course as a whole or in large parts, is taught in Swedish. Please note that although teaching language is Swedish, parts of the course could be given in English. Examination language is Swedish.
- If teaching language is Swedish/English, the course as a whole will be taught in English if students without prior knowledge of the Swedish language participate. Examination language is Swedish or English (depending on teaching language).
- If teaching language is English, the course as a whole is taught in English. Examination language is English.

#### Other

The course is conducted in a manner where both men's and women's experience and knowledge are made visible and developed.

The planning and implementation of a course should correspond to the course syllabus. The course evaluation should therefore be conducted with the course syllabus as a starting point.

## Department

Institutionen för ekonomisk och industriell utveckling

# Director of Studies or equivalent

Roland Gårdhagen

#### Examiner

Roland Gårdhagen
